I know no one can prevent reverse engineering an application even exe (binary) files are cracked and with PHP (source code) anyone can do.. In my country those reverse engineers are really hard to find, so I would like to propose minimal security options like:1) Create class (say, Navigation) which identifies system information like CPU ID, Computer name or any combination of hardware ID to make a UNIQUE_ID and matches with my given UNIQUE_ID (to the individual to whom I sold the application).. Drive Provided by the manufacturer through Get the actual serial number When prompted for the scan answer 'Yes' to allow it.. WBEMTest exe, which is installed on any Windows PC that supports WMI, will let you browse through the various Windows classes so you can see their properties.

ExecQuery('Select * from Win32_PhysicalMedia') if (Disk SerialNumber ') MsgBox% Disk.
